Art Unit: 1636

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 113-124 stand rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement, for reasons of record set forth in the previous Office Action. This is a new matter rejection.

At page 4 of the amendment filed 26 March 2009, Applicants argue that they have amended the independent claim to more clearly define the subject matter of the claims. Applicants then explain that the claim has been amended to recite an origin of replication functional in prokaryotes, first and second positive selection markers functional in prokaryotes, and that the first and second recombination sites do not recombine with each other. However, this merely sidesteps the issue, that there was no support for the genus, as claimed now or previously, in the specification as filed. Applicants then quote the Federal Circuit:

“A description of a genus of cDNAs may be achieved by means of a recitation of a representative number of cDNAs, defined by nucleotide sequence, falling within the scope of the genus or of a recitation of structural features common to the members of the genus, which features constitute a substantial portion of the genus ...” (Univ. of California v. Eli Lilly & Co., 43 U.S.P.Q.2d 1398, 1406 (Fed. Cir. 1996)). However, the concept of the particular generic types of components of the invention in the recited order was not presented in the specification or drawings as filed; rather, it has been imputed after filing. Any particular example, embodiment or drawing might give rise to an infinitude of such concepts or schematics. However, one of skill would not have known or understood which one was intended by

Applicants. As such, no particular genus, based on such a concept, would have been recognized by one of skill as being in possession of Applicants at the time of filing. The instant claims, therefore, are drawn to new matter.

This is an RCE of applicant's earlier Application No. 10/058,291. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
